Short Description

Brass mooring ring available in a polished brass or a chrome plated finish

This brass mooring ring is mounted on a base plate, allowing it to articulate and operate in multiple directions, making it an ideal choice for situations where fixing from behind is not possible. Typically used on yachts to direct lines and ropes, it can also be applied in various residential and industrial settings.

Designed for lighter loads, the mooring eye is crafted from brass and is supplied without fixings, although 316-grade stainless steel fixings are available separately, perfectly suited for the chrome-plated version. To securely install, you will need 4x 4.2mm (No.8) countersunk screws, which can be found in the related parts section below.

- Articulating mooring ring for versatile use
- Ideal for applications where fixing from behind is not possible
- Made from brass, suited to lighter loads
- Fixings not included (316-grade stainless steel fixings available separately)
- Requires 4x 4.2mm (No.8) countersunk screws for secure fixing
- Manufactured by Foresti & Suardi, known for high-quality marine hardware since 1961
