Short Description

A 316 grade stainless steel hatch locking device. Simply close the hatch and turn the handle to secure the opening lid. A cylinder key lock provides a low security deterrent to those wishing to gain unauthorised access to the hatch. A small lever simply blocks the handle from being lifted, therefore stopping the latch from being operated.

The product is made entirely from 316 grade stainless steel and comes complete with a counter plate and two keys.

The product features an off centre cam system in order to apply a 4mm compression when securing.
