Short Description

A chrome click-clack sink waste for use with sinks without overflow.

This sink pop-up waste is operated by pushing down on the waste lid and is sometimes referred to as a *"click-clack"* waste. The waste is secured in place with a screw, clamping the sink between the two waste parts making it suitable for thin walled sinks such as stainless steel sinks as well as traditional ceramic products.

The waste has a 1 1/4" BSP connection.
