Short Description

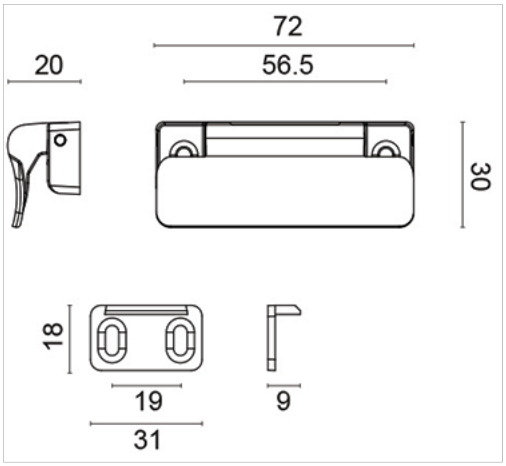

Push-to-close solid brass cupboard and drawer latch for

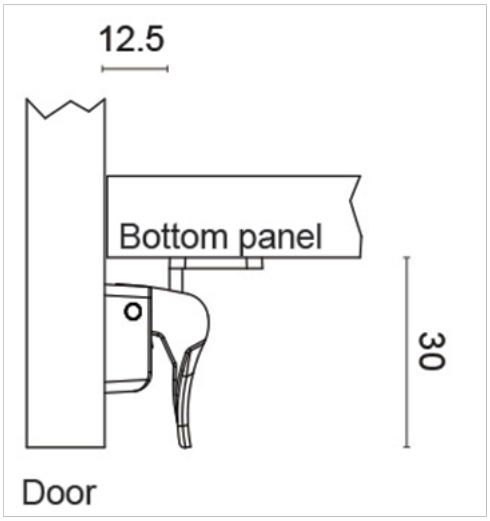

hidden installation

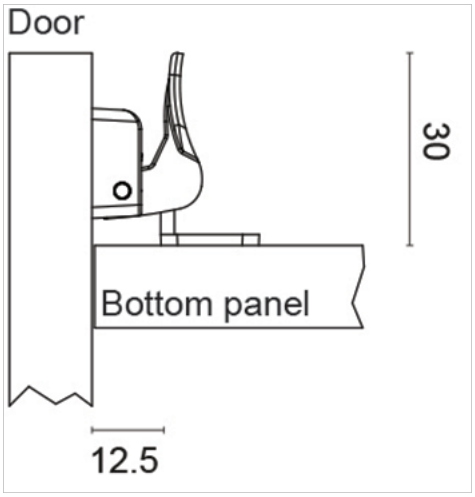

This latch is designed to be secured to the rear of a cupboard panel. The panel front must overlap the cupboard frame in the area where the latch is to be fitted. The lever can then be squeezed between fingers and palm, hinging the latch and disengaging it from the striker plate. When closing the panel, the latch has a push-to-close charateristic, allowing the user to simply push the door closed.

- Made from marine grade materials - all brass construction
- Complete with striker plate
- Discrete and no need for door knob or handle
- 'Push to close' [slam] action
