Short Description

Regeneration Powder for Idromar Watermakers

MC-K02 is a regeneration powder for Idromar watermakers and an important first step when winterising your desalinator in conjunction with the MC-K04 sterilising liquid.

- Dissolve the entire contents of the MC-K02 powder in a clean bucket filled with fresh water. Stir until the powder is completely dissolved.
- Pour the dissolved MC-K02 solution into a 100-litre container filled with fresh water. It's important to use a large container to avoid overheating the water during the regeneration process, as a small volume could cause serious damage to the membranes.
- Create a closed circuit with the watermaker system, ensuring the membranes are properly connected for the wash cycle.
- Run the system at approximately 15 bar pressure for 30 minutes to complete the cleaning cycle with the MC-K02 solution.
- Once the process is finished, drain the regeneration tank completely.

Additional Information

Weight	1.070000
Manufacturer	Idromar
