Short Description

Preserving Fluid for Idromar Watermakers

MC-K04 is a regeneration liquid for Idromar watermakers and an important second step when winterising your desalinator after cleaning the watermaker membranes with the MC-K02 powder.

- Dissolve the entire contents of the MC-K04 liquid in a clean bucket filled with fresh water.
- Exercise caution when handling MC-K04: avoid inhaling fumes, and do not touch your eyes if you've come into contact with the product.
- Re-start the system, maintaining the pressure at 15 bar, and allow the MC-K04 solution to circulate for approximately 15 minutes within the closed circuit.
- Once the sterilisation process is complete, empty the regeneration tank

Additional Information

Weight	0.080000
Manufacturer	Idromar
Watermaker Model	MC1J, MC2J, MC3J, MC5S, MC9S, MC12S, MC15S
