Short Description

316-grade stainless steel rotating handle with latching

plate.

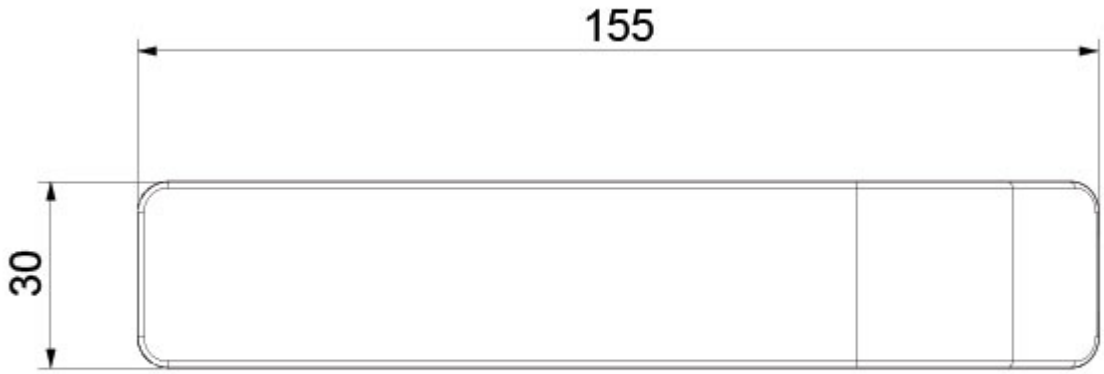

A mirror polished stainless steel handle that latches into a corresponding striker plate. The design of this handle is very simple, with a minimalist, clean form. The handle can be installed on a door that needs to be securley closed such as a fridge, freezer or storage locker. The compression action of the latching handle means that the product is particularly suited to a door with a gasket or seal where, upon rotating and securing the latch, the door would be compressed against its seal.

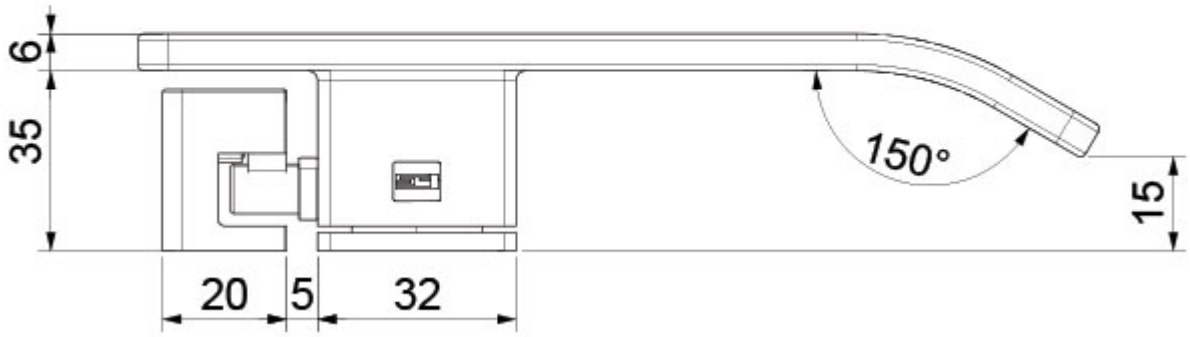

The handle is made using a casting method and is then polished to a mirror finish. The fitting is secured with four 3.5mm (no.6) countersunk screws which can be purchased separately below.
