Short Description

3 step ladder with iroko treads, in a watertight box

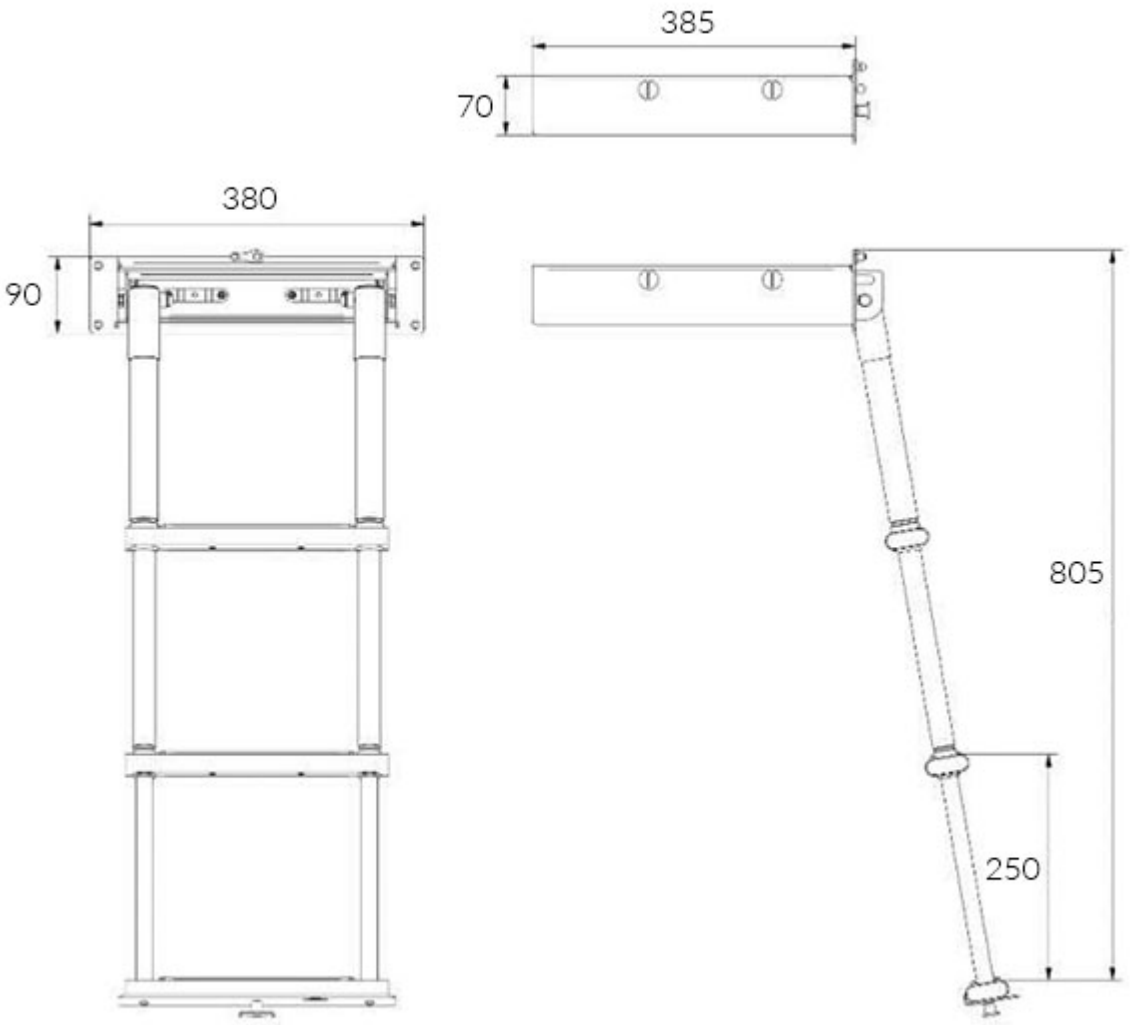

The '2370' telescopic under-platform ladder is a high-quality bathing ladder designed for easy access to and from your vessel. Crafted from mirror-polished 316-grade stainless steel, it comes securely housed in a watertight box, ensuring durability and protection from the elements.

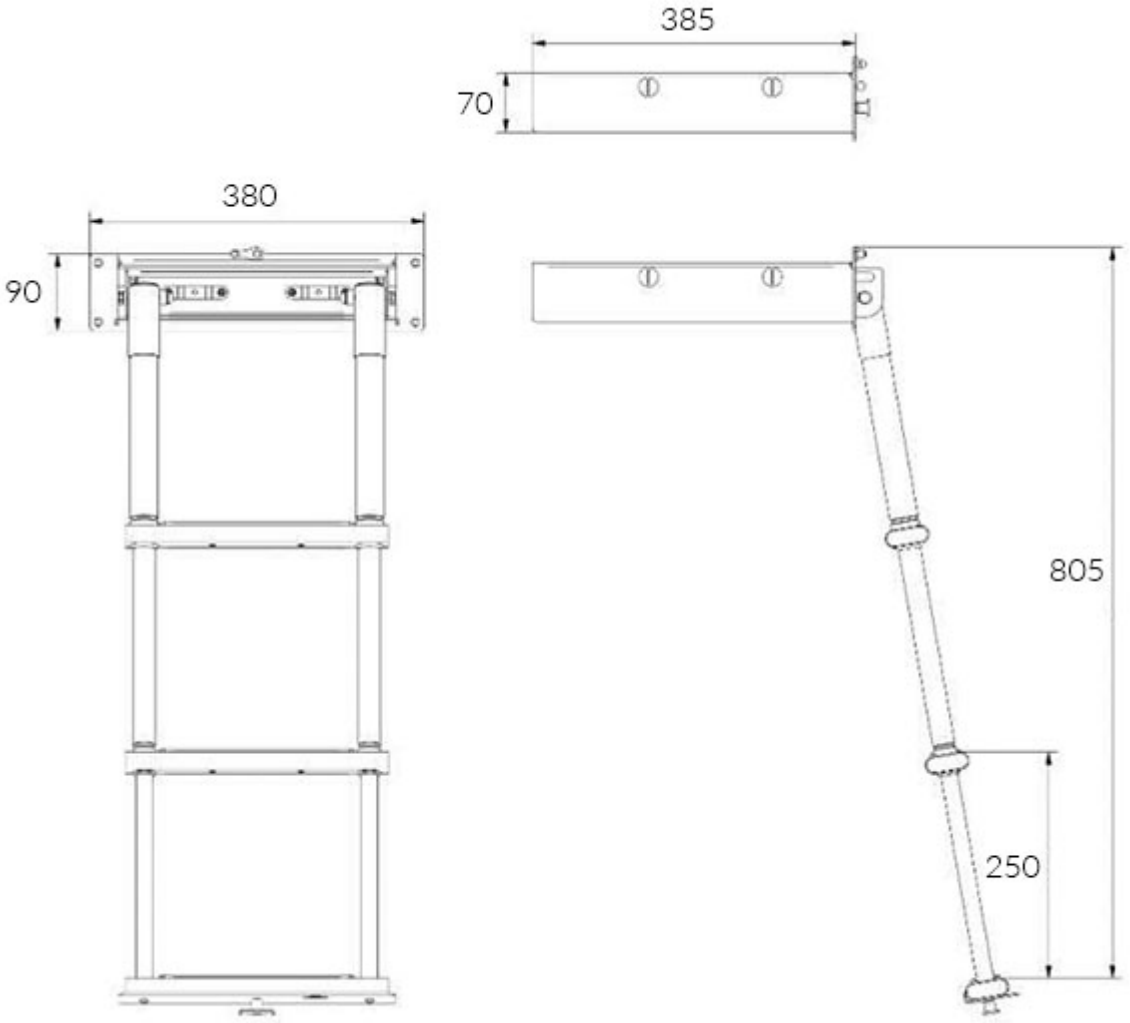

The ladder features three iroko treads, with water-draining holes and welded stainless steel side caps for

added strength and safety. A locking lid prevents deployment during sailing, providing peace of mind on the water. Made in Italy by Nautinox Milano, this ladder is now priced to clear as the iroko treads have been replaced by EVA foam in the updated version.
