Short Description

Cast 316 grade stainless steel joint cover for use with Bino-x and Sphaera fender profiles. This joint cover elegantly dresses the join between two stainless steel profile bars and requires a single screw fixing. It is recommended to use a countersunk domed head 316 grade (A4) screw (not supplied).

The joint cover not only dresses the join between two stainless steel profiles but also helps to correctly align the bars. The incorporated screw fixing in the joint cover also means that no extra holes are required in the end of the stainless steel bars either side of the joint cover.

A single joint cover is recommended inbetween every profile bar apart from when an end cap is used.
