Short Description

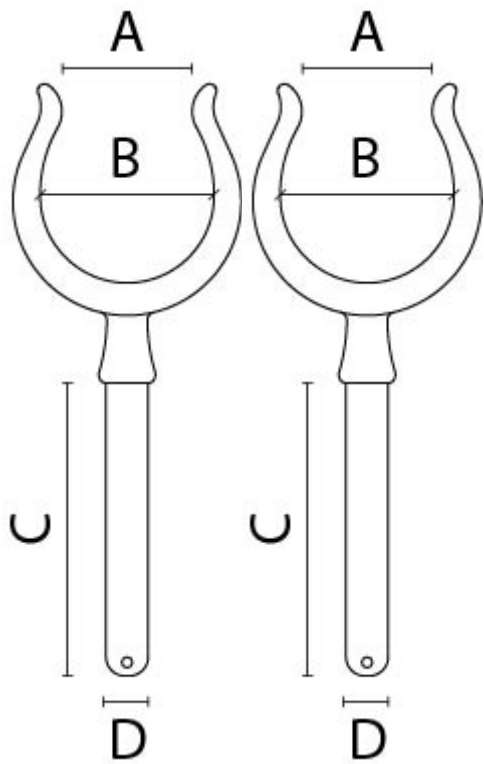

Pressure die cast brass rowlock available in a brass or chrome plated finish.

A rowlock is an important piece of hardware for any small rowing craft. The oar is designed to sit within the cradle of the rowlock, allowing the oar to articulate and lever correctly in the water, it acts as a fulcrum for the oar. This rowlock is a removable type and should be paired with a corresponding socket with an internal diameter of 14mm. We have a number of compatible solutions for this rowlock and can be found in the related products section below along with other compatible parts.

Foresti & Suardi have been manufacturing pressure die cast brass marine hardware since 1961. Fittings such as this rowlock are amongst the core products manufactured since those early days. The tooling may have been updated and technology has moved on a great deal, but these are the heritage pieces that established the reputation of Foresti & Suardi, as well as Timage, in the global yacht accessories market.
